Projects

• AJIO Deceptive Design Audit: Uncovered Dark Patterns in E-commerce Checkout

Aug 2026

Redesigning transparency back into AJIO's checkout flow

[Project Link](#)

- **Problem:** Conducted a UX audit of AJIO's checkout and onboarding flow, identifying three dark pattern issues: a hidden GST invoice option, a low-visibility skip button, and a misleading "free gift" promotion, that reduced transparency and user control.
- **Process:** Analyzed the user flow screen-by-screen to detect dark patterns, classified each against standard UX dark-pattern taxonomy (Sneaking, Aesthetic Manipulation, Bait-and-Switch) using AI-assisted research (Claude), and designed targeted fixes for visibility, contrast, and copy clarity.
- **Results:** Redesigned checkout and sign-up flows to surface the GST invoice option above the fold, equalize visual weight between the primary CTA and skip button, and replace misleading "free gift" messaging with accurate discount framing and direct access to redemption terms.
- **Impact:** Improved transparency and user trust by eliminating manipulative UI patterns, while preserving core business goals (sign-up conversion, discount promotion, reduced GST compliance overhead).

• Gas Booking App: For Elderly & Low-Literacy Users

Aug 2026

Booked in three taps: rethinking gas cylinder booking for users who struggle with apps

[Project Link](#)

- **Problem:** Identified accessibility gaps in existing gas cylinder booking apps that excluded elderly and low-literacy users through complex, text-heavy, multi-step flows.
- **Process:** Conducted competitor and secondary research on accessibility-focused design patterns, then built a low-fidelity wireframe to validate a simplified booking flow before developing a high-fidelity prototype in Figma.
- **Results:** Designed a streamlined booking flow with large touch targets, icon-and-text labeling, high-contrast visuals, and clear confirmation states to reduce user error and drop-off.
- **Impact:** Improved independent usability for elderly and low-literacy users, reducing dependency on others.

• Ecole Globale UX Report: Usability Audit for a Boarding School Admissions Site

Sept 2026

Auditing navigation, popups, and conversion flow for a premier boarding school's admissions site

[Project Link](#)

- **Problem:** Audited Ecole Globale's live admissions website and identified three usability issues limiting conversion for its two core users, parents and prospective students: a jarring Enquire Now popup, a non-functional and search-less navigation bar burying 30+ sub-items, and a campus-tour booking feature hidden in the site's fourth section.
- **Process:** Mapped real user click paths screen-by-screen against each user goal, benchmarked navigation depth to key content like fee structure, and designed wireframe fixes for each issue in Figma.
- **Results:** Redesigned the Enquire Now popup with softer styling and grouped calling options, replaced the nav bar with a mega-dropdown menu plus search, added a sticky sub-nav for content pages, and relocated campus-tour booking into the main navigation for visibility.
- **Impact:** Reduced navigation friction and click depth to key conversion actions, improving discoverability of the site's most distinctive features for prospective families.

Technical Skills

- **Image Editing:** Figma, Canva
- **Web Skills:** HTML, CSS, JavaScript
- **AI:** Image Generation, Video Generation, Prompt Engineering
- **Video Editing:** Adobe Premiere Pro, CapCut, Blender, Unity
